

EarthResourceML Features

The EarthResourceML collection of features represent the complex multi-commodity mine and mineral occurrence features.

Schema Info:

| EarthResourceML Version | Schema link | Documentation |
|-------------------------|--|-------------------------------|
| v2.0 | Earth Resource ML v2.0 | Documentation |

Mine

Mine contains the following mandatory properties:

- identifier
- shape
- status
- mineName (required by portals)

However, GGIC best practice is to populate as many of the schema elements/attributes as possible where data exists.

Note: If updating from v1 to v2 change the second gml:name into the correct identifier element and keep the first gml:name as the correct one.

eg.

```
<gml:identifier codeSpace="http://www.ietf.org/rfc/rfc2616">http://gsnsw.arrc.csiro.au/resource/feature/gsnsw/mine/101027</gml:identifier>
<gml:name codeSpace="http://www.resources.nsw.gov.au/minerals">Dobroyde Prospect</gml:name>
```

Complete Mine Example

```
