

Known Issues

- When selecting a time span a maximum number of 12 meteorological data files can be selected to use within HYSPLIT. Meteorological data is currently stored in monthly files which have data available at varying intervals. Therefore the maximum run duration is 1 year. Otherwise the simulation will fail to complete.
- We would suggest using Google Chrome or Mozilla Firefox. There are known issues with placement and functionality within older instances of Microsoft Internet Explorer.
- Aggregated Grid demarcation artifacts and KML artifacts. Please refer to [Grid Demarcation for more detail](#).

Please contact us if you identify any new issues.
