Overview

The SSSC will provide a mechanism that extends beyond VHIRL and useful to other Virtual Laboratories. It provides a process to cover off on the two use cases:

- 1) Science Code Developer - deploy scientific codes to the research/commercial cloud - "what is the standard way to deploy my science code to the cloud"
- 2) Science workflow publishers use case - share scientific code snippets/templates/workflows - "sharing my template that uses a (1) to do something"

A development version has been deployed at <http://vhirl-dev.csiro.au/scm>, and has been integrated into VHIRL v2 for testing.
